Active Weather Warnings, Watches and Advisories by County: http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

WEATHER SYNOPSIS BY REGION:

WEATHER

NORTHERN CALIFORNIA AND CENTRAL COASTAL AREAS:

Eureka Weather:

An upper ridge will result in hot temperatures throughout the interior again today, with widespread readings between 95 and 105 degrees. An approaching upper level low off the California coast will bring isolated to scattered thunderstorms from late Friday afternoon through the end of the weekend across mostly the interior.

Medford Weather:

A hot and unstable air mass will persist over the region during the next week. Low pressure offshore from California and high pressure centered in the great basin are the main upper level features affecting our weather in the short term with that strong ridging likely to persist through the week. Today and Saturday will be the hottest days with record highs likely to be set. But, at least the following five days will not be that much cooler. The forecast has been consistent in expecting valley highs during the next two days of 95 to 110 degrees on the west side of the cascades this afternoon and 92 to 102 on the east side.

Reno Weather:

High pressure will produce very hot and dry conditions this weekend with record highs likely today. Thunderstorms are possible along the sierra crest this afternoon with increased potential of thunderstorm coverage this weekend through early next week.

San Francisco Weather:

Cooler temperatures are expected today with more cooling on Saturday. Temperatures will start to swing warmer early next week. Mid and high clouds will increase this afternoon and will continue through the middle of next week.

CENTRAL CALIFORNIA AND SOUTHERN SAN JOAQUIN VALLEY:

Sacramento Weather:

Hot weather will continue for the next week, but a brief reprieve from triple digits in the central Sacramento valley this weekend. Mountain shower and thunderstorm activity Friday through the middle of next week. Thunderstorms may initially contain limited rainfall creating an increased fire threat.

Hanford Weather:

A ridge of high pressure over the four corners region will bring dry weather and above normal temperatures to the central California interior today. A northerly push of monsoonal moisture will bring an increasing chance of thunderstorms to mainly the higher terrain Saturday through Thursday.

WEATHER

WEATHER SYNOPSIS BY REGION:

SOUTHERN CALIFORNIA:

Los Angeles Weather:

Afternoon temperatures will remain above normal across inland areas with cooler conditions along the coastal areas today. A change in the weather pattern will begin Saturday as a surge of monsoonal moisture will move into the region bringing humid and warm conditions with a slight chance of afternoon thunderstorms mainly across the mountains and antelope valley starting Sunday and persisting through next week.

Extreme Southwestern California including Orange, San Diego, Western Riverside and Southwestern San Bernardino Counties:

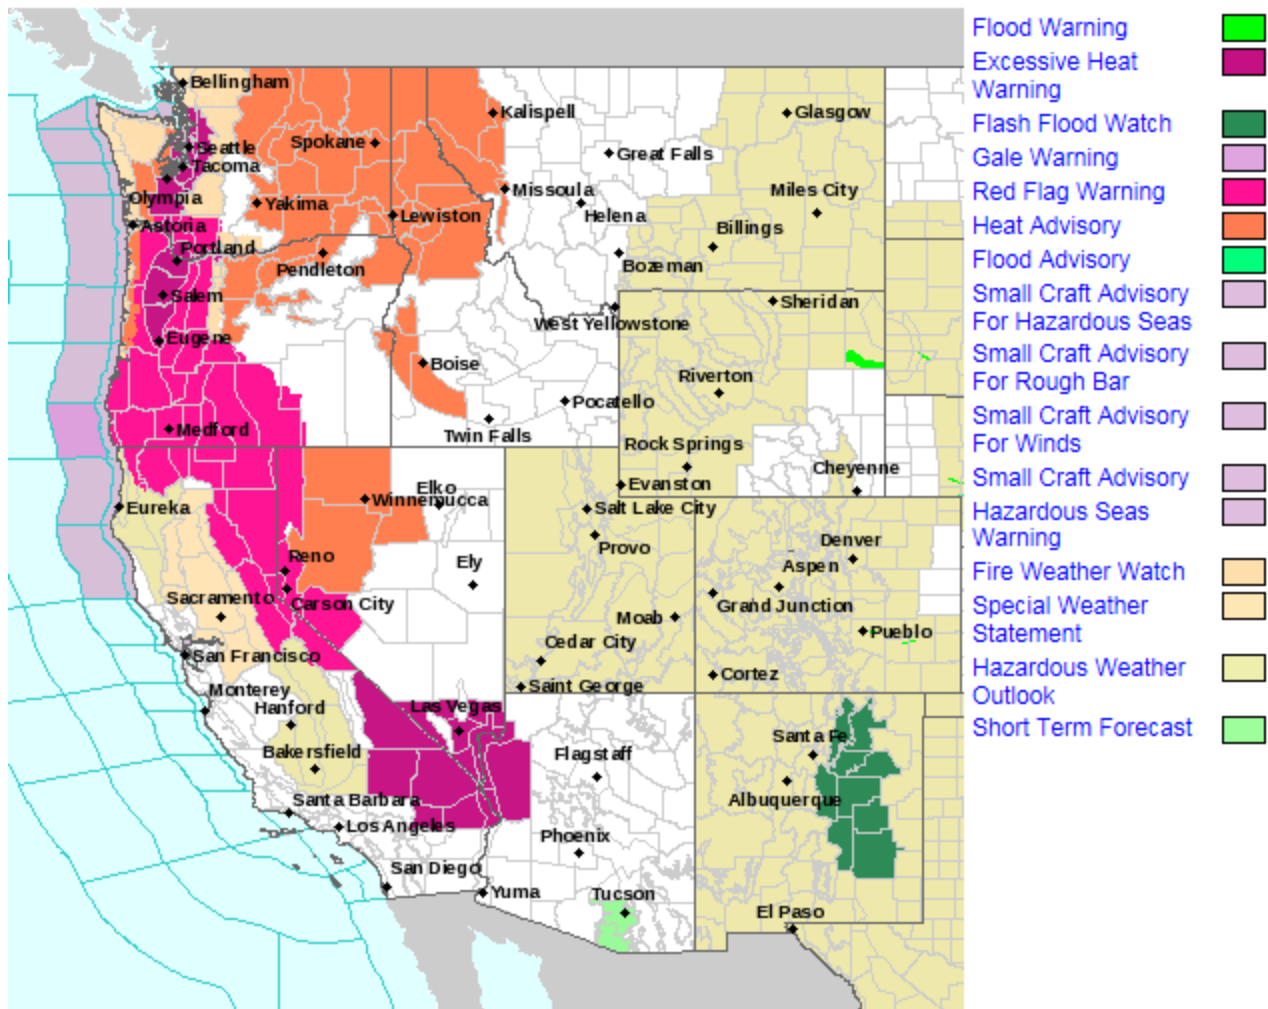

High pressure aloft will continue fair and warm weather through the weekend, with some coastal clouds each night and morning. Monsoon moisture will increase this weekend and continue into next week, which will bring increasing clouds, higher humidity, and a chance for afternoon and evening showers and thunderstorms, mainly in the mountains and deserts.

Southeast California Weather:

Thunderstorms will largely be confined to the higher elevations of eastern and southeast Arizona through Saturday, with some small chance of strong winds and blowing dust impacting lower desert communities. More humid air will overspread the region by early next week with more expansive storm chances affecting all areas. The increase in moisture and storm activity will lead to slightly cooler daytime temperatures but still warm overnights.
